Executive Welcome & Business Positioning

Welcome to NKEM GLOBAL SERVICES LIMITED

At NKEM GLOBAL SERVICES LIMITED, we are committed to delivering reliable, professional, and value-driven solutions to the Industrial, Engineering, Manpower, Project Support, and General Services sectors across Nigeria and beyond. Built on the principles of **Excellence, Integrity, and Results**, we understand that every successful project depends on the right people, the right support, and the right execution.

Operating from our administrative and logistics base in Oyigbo, Rivers State, we bridge the critical gap between international engineering consortia (including Turkish, Italian, Korean, and multinational EPCs) and dependable local site execution, maintaining rigorous safety standards, medical readiness, and community stability.

OUR FIVE CORE SERVICE LINES

Service Line	What We Deliver
01 Industrial Services	Hands-on execution of mechanical, structural, piping, and tank-related work packages, including scaffolding, insulation, and protective coatings.
02 Engineering Services	Field engineering supervision, technical documentation, isometric drawing interpretation, and QA/QC support embedded alongside client engineering teams.
03 Manpower Solutions	Vetted, trade-tested ASME IX welders, pipe fitters, riggers, scaffolders, safety officers, and general craft labour mobilised on demand within 48-72 hours.
04 Project Support & Cleaning	Turnaround cleaning, post-construction clean-down, hazardous/non-hazardous waste management, sump clearance, and continuous site housekeeping.
05 General Services	Logistics, personnel transport, camp and accommodation support, local procurement coordination, and structured community/stakeholder liaison.

INDUSTRIES WE SUPPORT

Oil, Gas & Energy Facilities	Heavy Construction & Infrastructure	Manufacturing & Marine Terminals
Flow stations, gas processing plants, pipeline rights-of-way, compression facilities, export terminals, and refinery maintenance shutdowns.	Commercial civil projects, structural steel yards, bridges, road corridors, and pre-cast concrete facilities.	Industrial manufacturing plants, bulk liquid storage farms, maritime staging jetties, and heavy equipment logistics yards.

Corporate Identity, Mission & Strategic Vision

Our identity is anchored in three non-negotiable operational commitments. In an industry where delayed mobilisations and substandard personnel cause expensive downtime, NGS builds its reputation by fulfilling its promises with disciplined predictability.

EXCELLENCE

We deploy qualified craftspeople who understand their trade and perform strictly to client engineering specifications, avoiding costly rework and safety violations.

INTEGRITY

We maintain total transparency in billing, verified qualifications, statutory employee remittances, and honest progress reporting across all project stages.

RESULTS

We measure our contribution through safe man-hours, clean handovers, verified productivity logs, and zero Lost Time Injuries (LTI) across all operational fronts.

MISSION STATEMENT

To serve as Nigeria's most responsive and dependable subcontractor for industrial workforce provisioning and field support services, delivering vetted technical personnel, immaculate worksite housekeeping, and proactive management to industrial projects while upholding the highest standards of safety, ethics, and community harmony.

VISION STATEMENT

To become the indigenous subcontractor of choice for major international EPC contractors and plant operators throughout Nigeria, recognised for elevating local craft standards, setting benchmarks in industrial cleaning, and delivering dependable field performance.

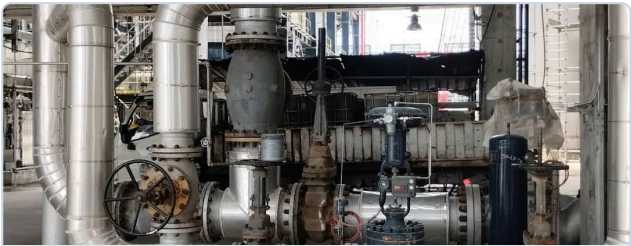

STRATEGIC CORPORATE OBJECTIVES

- 1 Contractor Peace of Mind:** Protect prime contractors from project delays, community disputes, and craft-level technical deficiencies.
- 2 Strict Nigerian Content Development:** Provide sustainable employment, skill verification, and trade development to Nigerian youth, especially within host communities.
- 3 Rapid Mobilisation Response:** Maintain an active, pre-vetted database of over 250 skilled trades and certified cleaners ready for deployment within 48 to 72 hours.
- 4 Zero-Tolerance Safety Protocol:** Maintain an unblemished safety record across all work fronts by implementing mandatory daily toolbox briefings and hazard checks.

Worksite Ethics, Culture & Operating Standards

Technical capability alone does not guarantee a successful project; worksite culture determines outcomes. At NGS, we maintain a firm code of field discipline. When our personnel put on client or NGS-branded coveralls, they represent our collective commitment to safety, professionalism, and respect for site authority.

We enforce a structured operational environment where punctuality, permit compliance, and respectful collaboration with multinational inspection teams form the daily routine on every industrial job.

Precision valve manifold and instrumentation tie-in – the standard of care and discipline expected on every NGS work front.

Operating Standard	Field Implementation & Enforcement
Site Discipline & Punctuality	Crews arrive 30 minutes before shift commencement for medical gate checks, equipment muster, and mandatory toolbox briefings. Zero tolerance for unauthorised absences or insubordination.
Permit-to-Work Compliance	No NGS personnel may touch a tool, enter a confined vessel, or start a hot-work activity without a verified, signed client Permit to Work (PTW) and approved Job Safety Analysis (JSA).
Substance Abuse Prohibitions	Strict zero-tolerance policy regarding alcohol and unprescribed drugs. Random testing is conducted, and immediate dismissal follows any violation.
Client Asset Protection	Careful handling of client machinery, materials, electrical systems, and tools. Systematic tool logging at shift start and close prevents loss, tool damage, or foreign-object contamination.
Interpersonal Respect	Professional interaction with multinational site managers, site engineers, QA/QC inspectors, and third-party contractors regardless of nationality or background.

The Stop-Work Authority (SWA) Culture:

Every employee and deployed craftsperson from NGS is trained and empowered with full Stop-Work Authority. If a worker spots an unaddressed hazard, unstable scaffolding, an uncertified lifting sling, or an unmonitored gas risk, they are required to stop the job immediately without fear of penalty. Work only resumes when the area is made safe and certified by the supervising authority.

Core Service 01: Industrial Services

Beyond simply supplying labour, NGS takes direct ownership of hands-on industrial work packages. Our industrial services division executes mechanical, structural, piping, and tank-related scopes under supervised crews, giving prime contractors a single accountable partner for physical site execution rather than a loose collection of individual tradespeople.

Work Package	Scope of Execution
Mechanical Erection & Installation	Equipment positioning, alignment, and bolt-up of pumps, skids, vessels, and rotating machinery under supervised crews.
Structural Steelwork	Fabrication, erection, and bolt-torque of structural steel frames, platforms, pipe racks, and support structures.
Piping & Tank Works	Spool fabrication, installation, hydro-testing assistance, and storage tank plating, welding, and maintenance support.
Scaffolding Erection & Dismantling	Certified system and tube-and-coupler scaffold builds, tagging, inspection, and safe dismantling on completion.
Insulation & Cladding	Thermal insulation installation and protective metal cladding for piping, vessels, and process equipment.
Industrial Coatings & Corrosion Control	Surface preparation to SA 2.5 standard, protective coating application, and pipeline joint wrapping.

Industrial Services work is delivered under a dedicated site foreman with daily progress tracking, keeping physical work packages moving in step with the client's overall project schedule.

Core Service 02: Engineering Services

NGS provides field-level engineering support that sits alongside client engineering teams, translating technical drawings and specifications into safe, accurate work on the ground. This service line closes the gap between design intent and site execution, reducing rework and keeping documentation audit-ready.

Function	Field Application
Technical Supervision	On-site engineering oversight of piping, structural, and mechanical work fronts against approved isometrics and general arrangement drawings.
Drawing & Specification Interpretation	Reviewing isometrics, P&IDs, and structural drawings with crews to ensure work is executed to specification the first time.
Quality Documentation & QA/QC Support	Preparing inspection test plans, weld maps, punch-lists, and material traceability records for client QA/QC sign-off.
Method Statements & Job Safety Analyses	Drafting task-specific method statements and JSAs in line with client engineering and HSE standards.
Materials Take-off & Planning Support	Quantity take-offs, materials tracking, and work-front sequencing to support project planning teams.
As-Built Documentation	Recording site deviations and compiling as-built markups for handover to the client's engineering records.

Our engineering support personnel act as a technical bridge between international design teams and local execution crews, ensuring nothing is lost in translation between the drawing and the finished work.

Core Service 03: Manpower & Workforce Solutions

Certified ASME IX 6G welder executing precision pipe spool root pass in shop bay.

Multi-craft maintenance crew servicing shell-and-tube exchangers during plant turnaround.

Sourcing, screening, mobilising, and managing skilled labour in industrial environments is a major challenge for project managers. NGS takes full ownership of workforce management, providing reliable talent matched to specific task scopes.

Trade Classification	Specialised Roles & Skills	Project Applications
Mechanical & Piping	6G SMAW/GTAW Welders, Pipe Fitters, Mechanical Fitters, Millwrights, Fabricators.	High-pressure process piping spools, structural steel erections, flange bolt-up, pump alignment.
Access & Rigging	Certified Scaffold Erectors, Scaffold Inspectors, Heavy Riggers, Crane Banksmen.	Scaffold build/tagging for tall process columns, heavy equipment positioning, tandem crane lifts.
Corrosion & Surface	Grit & Sandblasters, Airless Spray Painters, Protective Coating Applicators.	Surface preparation to SA 2.5 standard, tank internal/external painting, pipeline joint wrapping.
Site Safety & Oversight	Field Safety Officers, Permit Officers, Fire Watchmen, Confined Space Attendants.	Hot-work spark containment, atmospheric testing monitoring, continuous site hazard identification.
General Craft Support	Civil Helpers, Loading/Offloading Crews, Tool Crib Attendants, Material Handlers.	Rebar tying, concrete pouring support, pipe yard inventory sorting, staging management.

Vetting and Administration Workflow:

- **Trade Skill Verification:** Welders and fitters undergo practical workshop test coupons (radiographic/ultrasonic testing) before client deployment.
- **Medical Fitness:** Standard industrial pre-employment medical examinations (audiometry, chest X-rays, visual acuity, drug/alcohol screening).
- **Turnkey Payroll & Statutory Cover:** NGS manages daily payroll, host-community remittances, PAYE tax, and Employee Compensation (NSITF) cover.

Core Service 04: Project Support & Cleaning Services

Surface preparation, industrial cleaning at height, and rockwool lagging application on process units.

Field piping, valve maintenance, and equipment skid housekeeping around centrifugal pump stations.

On high-risk industrial sites, cleaning is not simply cosmetic – it is an essential safety and engineering requirement. Debris-strewn fabrication shops, oil-contaminated decks, blocked drainage trenches, and uncleaned process equipment cause slip-and-trip hazards, increase fire risks, and delay project commissioning. NGS provides structured industrial cleaning and logistical field support.

Industrial Cleaning Work Packages:

- **Turnaround & Plant Shutdown Cleaning:** High-pressure washing and mechanical scraping of heat exchangers, process vessels, storage tanks, reboilers, and sumps during planned turnaround maintenance.
- **Post-Construction Plant Clean-down:** Comprehensive clearing of construction debris, spent electrodes, structural cut-offs, insulation scraps, and paint drums ahead of pre-commissioning walkthroughs.
- **Fabrication Shop & Yard Housekeeping:** Continuous shift-by-shift removal of grinding swarf, blast grit, metal off-cuts, and grease spills to maintain safe work zones.
- **Drainage, Trench & Sump Clearance:** Manual and mechanical clearing of industrial storm drains, oily-water separators, containment bunds, and culverts across facility plots.
- **Facility, Office & Accommodation Janitorial:** Routine daily and deep sanitisation for project office complexes, site clinics, muster shelters, meeting rooms, and camp dormitories.

DEDICATED SITE SUPPORT OPERATIONS

Support Function	Operational Execution Details
Waste Management Support	Colour-coded segregation (metal, wood, domestic, hazardous/chemical) at source; maintaining safe containment skips and preparing manifest transfers.
Laydown & Material Staging	Assisting warehouse teams with pipe racking, dunnage placement, valve palletising, protective covering, and barcode tagging.
Temporary Weather Enclosures	Fabricating and erecting specialised tarpaulin shelters, windbreakers, and rain canopies to protect sensitive welding and instrumentation work fronts.

Core Service 05: General Services

Large industrial projects depend on a wide range of everyday support functions that keep a site running smoothly behind the scenes. NGS provides general services covering logistics, camp support, procurement coordination, and community relations, allowing client project teams to stay focused on core delivery.

Service Area	Operational Support Provided
Logistics & Transport	Personnel transport, materials haulage, and coordination of light vehicles between site, camp, and town.
Camp & Accommodation Support	Dormitory upkeep, catering liaison, and welfare arrangements for mobilised crews on remote or extended assignments.
Procurement Coordination	Sourcing and local coordination of consumables, PPE, tools, and minor site materials from vetted local suppliers.
Security Liaison	Coordination with site security and local law enforcement to support safe, uninterrupted site access.
Community & Stakeholder Relations	Structured engagement with host communities, traditional councils, and youth groups to maintain site stability.
Administrative & Office Support	Project office administration, documentation filing, and general clerical support for site management teams.

General Services is the connective tissue that keeps every other NGS work front running without avoidable interruption – from a delayed vehicle to an unresolved community concern.

Mobilisation & Project Delivery Workflow

Delivering consistent support requires an orderly, repeatable process. From initial scope review to final close-out documentation, NGS adheres to a six-stage execution protocol that keeps project managers updated on every milestone.

Stage	Activity Focus	Deliverables & Control Points
01. Understand	Scope Clarification & Site Survey	Clarify craft trade levels, cleaning areas, site hazards, shifts, PPE standards, and project schedule milestones.
02. Plan	Resource & Safety Planning	Develop task method statements, Job Safety Analyses (JSA), tool allocation rosters, and host community labour distribution.
03. Mobilise	Vetting, Inductions & Logistics	Conduct medical clearance, safety briefings, client security badging, and transport deployment to the work zone.
04. Execute	Supervised Shift Operations	Deploy crews under working foremen; manage daily permits, tool checks, shift muster, and direct field supervision.
05. Verify	Joint Inspection & QA Sign-off	Conduct walkthroughs with client QA/QC inspectors, obtain signed daily shift cards, and resolve punch-list items.
06. Close-out	Demobilisation & Reporting	Compile verified timesheets, complete safe demobilisation handovers, and submit final invoices with transparent audit backups.

Health, Safety & Environmental (HSE) Policy

At NKEM GLOBAL SERVICES LIMITED, zero injuries, zero property damage, and zero environmental incidents are fundamental operational baselines. We consider HSE compliance a key production metric; an unsafe operation cannot be productive.

HSE Pillar	Operational Execution & Enforcement
1. Pre-Job Hazard Analysis	Before starting any task, our supervisors review the site JSA with the full crew, identifying pinch points, pressurised lines, drop hazards, and environmental risks.
2. PPE Compliance Standards	Every deployed worker is equipped with standard PPE: flame-retardant coveralls, impact gloves, steel-toed boots, eye protection, and hard hats. Specialised task-specific PPE (respirators, harnesses) is inspected daily.
3. Heat Stress & Fatigue Control	Structured hydration stations, scheduled shade rests during high heat index hours, and shift rotations to ensure workers remain alert on critical jobs.
4. Environmental Protection	Immediate deployment of drip trays under stationary power units and fuel transfer points. Hydrocarbon spills are contained using certified absorbent materials and reported without delay.
5. Incident Reporting	All near-misses and unsafe conditions are formally documented and addressed at daily safety huddles, preventing repeat occurrences.

Quality Assurance & Field Supervision

Quality in labour supply and site support means delivering reliable craftspeople and meeting task requirements on time, with minimal supervision from the main contractor.

Quality Milestone	Verification Mechanism	Direct Client Benefit
Skill Verification	Hands-on testing and certificate verification before field placement.	Eliminates unqualified personnel from critical site tasks.
Daily Attendance Tracking	Biometric or signed time registers verified each morning and evening.	Transparent billing with zero unverified man-hours.
Work Inspection	Joint daily walkthroughs covering clean surfaces, vessel clearances, and trade outputs.	Immediate close-out of punch-list items without delayed milestones.
Labour Replacement Guarantee	Immediate demobilisation and 24-hour replacement of non-performing personnel.	Maintains work-front momentum and protects project schedules.

Dedicated Field Supervisory Structure:

On all substantial projects, NGS provides dedicated non-working site supervisors. They bridge communication between international client managers and local labour, manage site attendance, coordinate task permits, and resolve community-related matters before work is disrupted.

Workforce Trade & Competency Directory

NGS maintains an active registry of vetted industrial personnel across multiple disciplines. All candidates are evaluated for technical competence, safety awareness, and work ethic.

Discipline	Certified Roles	Field Qualifications & Standards
Piping & Welding	6G Pipe Welders (Carbon & Stainless), Pipe Fitters, Tack Welders.	ASME Section IX qualification test coupons; isometric drawing interpretation; precise beveling and fit-up tolerances.
Structural Trades	Structural Fitters, Plate Fabricators, Flame Cutters, Grinders.	Structural alignment, torque-tightening, oxy-acetylene torch operation, plate layout and tacking.
Scaffolding & Access	Tube & Coupler Scaffolders, System Scaffold Erectors, Inspectors.	BS 1139/EN 12811 compliance; full body harness safety; Scaffold inspection and green-tag sign-off authority.
Rigging & Lifting	Certified Riggers, Heavy Lift Spotters, Crane Banksman.	Sling angle calculation, shackle inspection, hand and radio signaling, lifting permit compliance.
Industrial Cleaning	Hydro-jetting Hands, Vessel Cleaners, Heavy Industrial Sweepers.	Confined space entry certification, breathing apparatus readiness, chemical spill cleanup training.
Field HSE Support	Field Safety Stewards, Fire Watchmen, Confined Space Guards.	First aid certifications, fire extinguisher deployment, gas detection monitoring, emergency egress control.
General Labour	Civil Hands, Site Housekeepers, Staging Helpers, Offloaders.	Verified fitness-for-work certificates, site safety induction, safe manual lifting and handling techniques.

Industrial Capability & Work Environments

The photographic references featured in this profile represent the exact operational settings where our personnel execute daily duties. We supply skilled trades and cleaning crews to complex oil, gas, chemical, and manufacturing facilities across Nigeria.

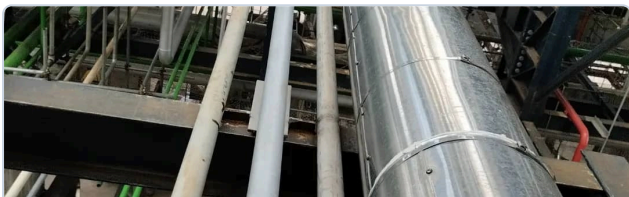

Process column turnaround with BS 1139 scaffolding access.

Shell-and-tube heat exchanger bundle maintenance.

Industrial chiller plant mechanical manifold piping.

Elevated pipe-rack process piping and aluminum jacketing.

Heavy-wall pipe spool fabrication yard and workshop bay.

FACILITIES WE OPERATE IN

Refinery & Petrochemical Units	Gas Facilities & Flow Stations	Storage Terminals & Tank Farms
Column turnaround cleaning, exchanger bundle pulls, tray replacements, mechanical fitting, and high-elevation scaffolding.	Skid assembly, pipe spool modifications, hydro-testing assistance, trench line clearing, and ongoing site housekeeping.	Tank cleaning, bottom desludging, annular plate cutting/welding assist, containment wall maintenance, and protective coatings.

The Contractor Advantage: Why Choose NGS

Managing tier-1 engineering projects in Nigeria involves real operational friction: host community pressures, fluctuating labour demands, credential verification issues, and worksite safety compliance. NGS is organised to handle these challenges directly, serving as a dependable local support partner.

Operational Advantage	Contractor Commercial & Site Benefit
Strategic Base in Oyigbo	Immediate road connectivity to Port Harcourt, Onne Oil & Gas Free Zone, Aba industrial belt, and Delta operations corridors, keeping mobilisation costs and times low.
Proactive Community Liaison	Proven protocols for engaging traditional councils, youth groups, and community stakeholders, ensuring site stability and uninterrupted project progress.
Flexible Commercial Terms	Adaptable contract options: lump-sum work packages for cleaning, unit-rate delivery, or competitive daily/monthly time-and-material (T&M) rates.
Straightforward Management	Direct access to senior executive leadership without corporate bureaucracy. Field adjustments, crew scaling, and urgent issues are addressed promptly.
Audit-Ready Transparency	Full compliance records for employee welfare, pensions, taxes, and medical clearances, simplifying vendor onboarding and audit compliance.

Corporate Governance, Compliance & Leadership

NKEM GLOBAL SERVICES LIMITED maintains complete corporate and statutory documentation, ensuring straightforward pre-qualification on international EPC and operator vendor lists.

We operate in strict adherence to Nigerian corporate laws, fiscal regulations, and international anti-money laundering and workforce welfare governance frameworks.

STATUTORY PRE-QUALIFICATION & COMPLIANCE MATRIX

Statutory Authority / Regulation	Compliance Status & Verified Documentation
Corporate Affairs Commission (CAC)	Fully incorporated Nigerian Private Limited Liability Company RC: 9855308.
Federal Inland Revenue Service (FIRS)	Valid Tax Identification Number (TIN); verified VAT registration and corporate tax status.
Tax Clearance Certificate (TCC)	Current corporate Tax Clearance Certificate (TCC) verifying full fiscal standing.
Special Control Unit Against Money Laundering (SCUML)	Registered and certified in adherence to statutory AML/CFT compliance standards.
Industrial Training Fund (ITF)	Compliant with the ITF Act; dedicated to technical skills training and workforce capacity building.
Employee Welfare & Compensation (NSITF)	Compliant with the Employee Compensation Scheme (NSITF); worker accident cover maintained.
Nigerian Indigenous Content & Equity	100% Nigerian indigenous equity and management; committed to local trade hiring and craft development.

Raphael Nkemjika Julius 2026 MANAGING DIRECTOR

Providing operational leadership, client relationship management, and strategic field supervision across all NGS contracts. Raphael Nkemjika Julius oversees workforce mobilisation, ensures strict HSE compliance across project sites, and maintains active dialogue with prime contractor management teams to ensure work meets project requirements and deadlines.

NKEM GLOBAL SERVICES LIMITED (RC: 9855308)

OUR MOTTO: EXCELLENCE • INTEGRITY • RESULTS

Your trusted Nigerian partner for industrial and engineering execution, manpower and workforce solutions, project support and cleaning services, and general site services.
